

Pepper Riot - Chat Summary

A concise summary of the same source conversation used for the Full Chat-to-Document sample.

What this sample shows: the useful takeaways from a long AI conversation - decisions, working assumptions, next actions, open questions, and deferred items - without rebuilding the material into a full standalone project plan.

Project at a Glance

Concept	Test a small three-flavor hot sauce line through Austin-area farmers markets before making a major inventory or equipment investment.
Products	Mild Green, Smoky Red, and Hot. Recipes are not yet standardized.
Initial test batch	6 bottles per flavor; 18 bottles total.
Working brand	Pepper Riot is the current favorite, but name/trademark availability still needs to be checked.

Working Numbers and Constraints

Retail price	\$8 / bottle	Guess
Ingredient cost	\$2 / bottle	Guess
Bottle cost	~\$1	Memory / unverified
Pre-market spending ceiling	\$150	Provisional; legally required costs may force reconsideration

Important: the financial figures above are not verified and should not be treated as final economics.

This Week

- Identify three candidate Austin-area farmers markets.
- Review market rules and vendor fees.
- Research permit and home-production requirements.
- Make one test recipe of each flavor.
- Calculate actual ingredient cost from the test batches.
- Contact Jen about label design.
- Check Pepper Riot name availability.

Open Questions

- Which farmers markets are viable?
- What permits are required?
- Can the sauce legally be produced at home?
- What labeling rules apply?
- What rules apply to samples?
- Are there temperature-control requirements?
- Which payment method, if any, should be used first?

Explicitly Deferred

Website Not needed before validation.	Large production batch Wait for first test results.	Tent / canopy Wait for market requirements.	Card-processing equipment Wait until selling venue is known.	Professional labels Wait for Jen and regulatory requirements.
